FIRE FIGHTERS DEATH RATE AT NEW HIGH

The 1960 death rate among
fire fighters reached a new high
for recent years, a survey of the
record has revealed.

The death and injury list,
compiled in 1,200 communities
by the Research Dept. of the Fire
Fighters, showed that 68 per
100,000 were killed in the line of
duty during the past year, com-
pared to 66 per 100,000 the pre-
vious year. In 1958, 37 per 100,-
000 lost their lives, and in 1957
the toll was 54 killed per 100,000.

The survey also revealed that
21 out of every 100 fire fight-
ers suffered injuries in the line
of duty. This compares to the
general injury rate of workers
of 3 of 100.

The survey showed that haz-
ards facing fire fighters are be-
coming greater as science and
technologies advance.

full during the summer!
A partially filled tank
will "breathe" air. The
air contains water
vapor which could con-
dense, putting water in
the oil. Result: Igni-
tion trouble next fall!
